

Premier® Tent Heater Distribution Solutions

L.B. White offers a full range of ducting and air distribution solutions for our quiet, efficient Premier heaters. And now, we're pleased to introduce two new additions to our ducting and distribution accessories...

A new multi-directional heat distribution system for the Premier 170...

And a new, versatile 100 foot perforated duct perfect for floor or ceiling heat distribution with the Premier 350.

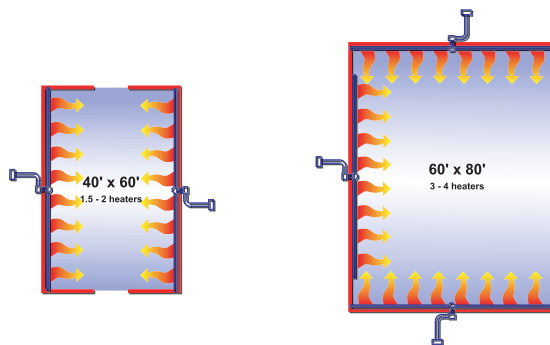

Premier® Tent Heater Distribution Solutions

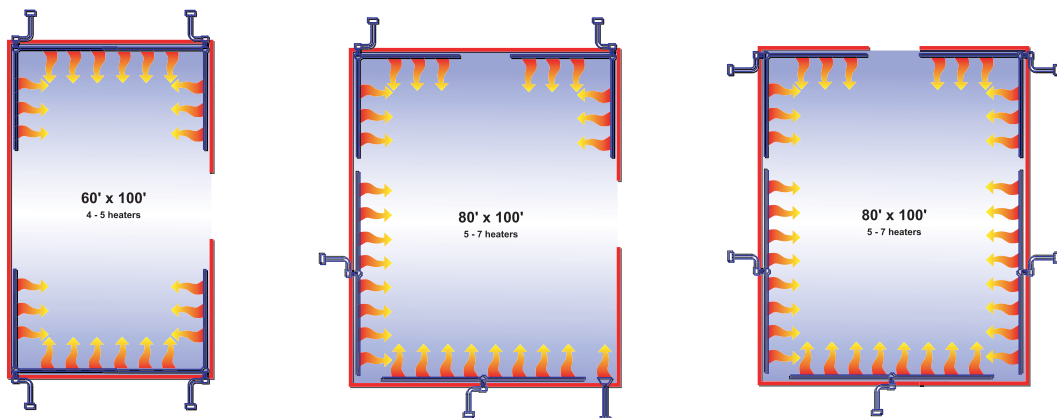

Premier® 170 Heat Distribution System

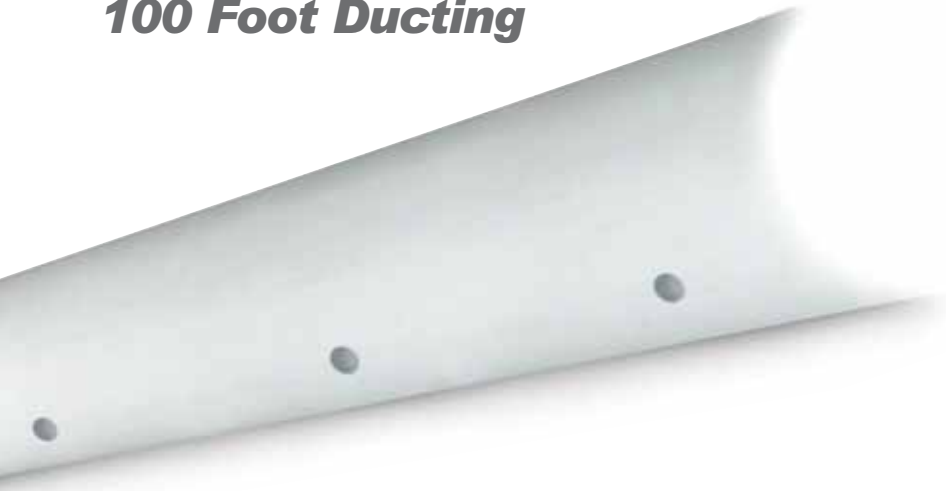

Introducing an innovative heat distribution system for the Premier 170 that enables you to boost and direct heat through multiple 30 foot perforated ducts at the same time. Available as a complete system or as separate accessories, the distribution system can be set up to work with existing Premier 170 heaters or purchased for use with a new heater.

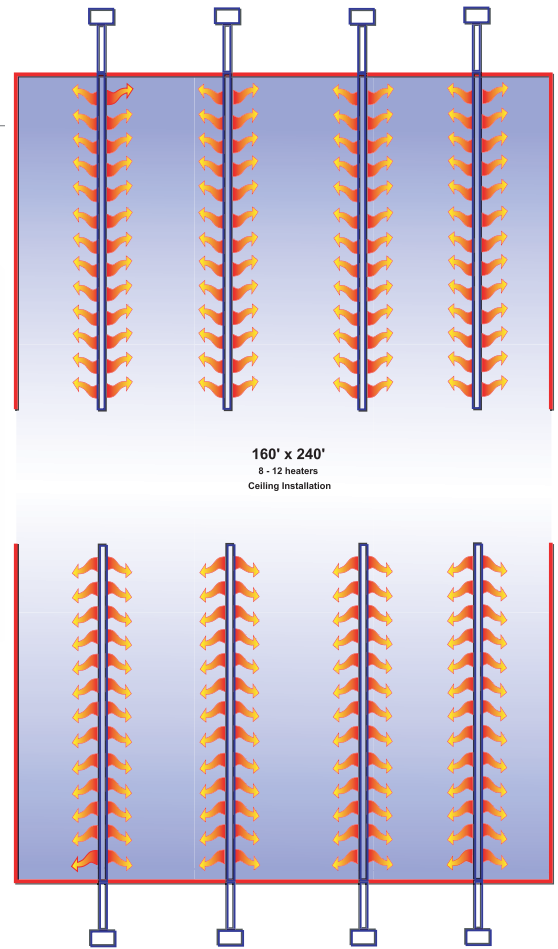

Sample Premier 170 distribution installations.

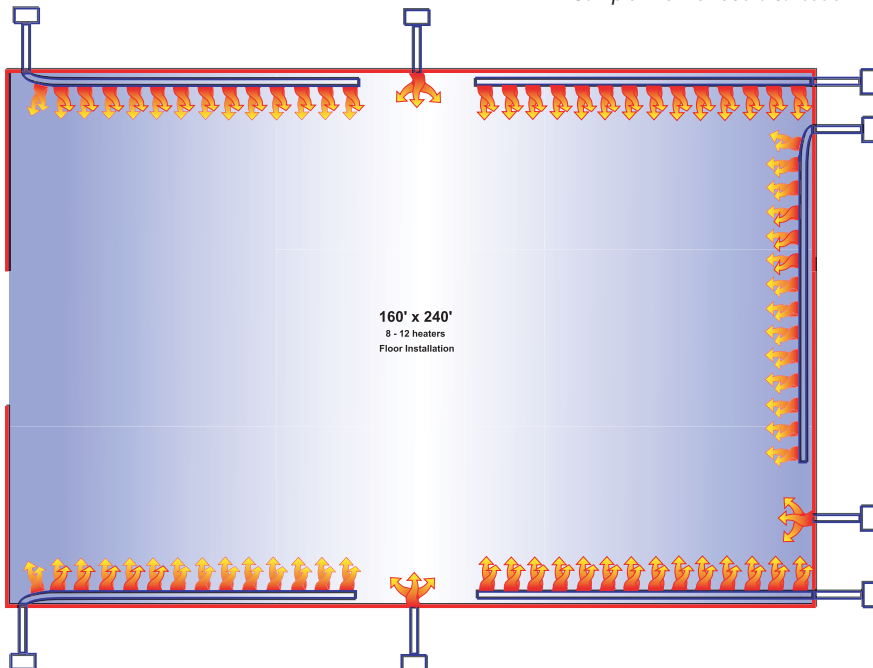

Premier® 350 Perforated 100 Foot Ducting

For larger heat applications, the 100 foot perforated duct for the Premier 350 gives you an extremely efficient way to distribute heated air quickly and easily from overhead or from the ground up. The perforated ducting is compatible with existing (non-perforated) L.B. White ducting. For ceiling suspension, a connection duct length of 20 feet is recommended between the Premier 350 heater and perforated duct.

Sample Premier 350 distribution installations.

Quality heaters you can count on.

Premier® Air Distribution Equipment

Item	Part #	Item Description	Premier 80	Premier 170	Premier 350
